QUESTION 1.6.24

Find the values of k if the points

$$A(2, 3), \quad B(4, k), \quad C(6, -3)$$

are collinear.

SOLUTION

$$\mathbf{A} = \begin{pmatrix} 2 \\ 3 \end{pmatrix}, \quad \mathbf{B} = \begin{pmatrix} 4 \\ k \end{pmatrix}, \quad \mathbf{C} = \begin{pmatrix} 6 \\ -3 \end{pmatrix} \quad (0.1)$$

Form the direction vectors:

$$\mathbf{B} - \mathbf{A} = \begin{pmatrix} 2 \\ k - 3 \end{pmatrix}, \quad \mathbf{C} - \mathbf{A} = \begin{pmatrix} 4 \\ -6 \end{pmatrix}. \quad (0.2)$$

Construct the matrix (columns are the direction vectors):

$$(\mathbf{B} - \mathbf{A}, \mathbf{C} - \mathbf{A}) = M = \begin{pmatrix} 2 & 4 \\ k - 3 & -6 \end{pmatrix}.$$

Row reduction to get echelon form(showing main steps):

$$M \xrightarrow{R_1 \leftarrow \frac{1}{2}R_1} \begin{pmatrix} 1 & 2 \\ k - 3 & -6 \end{pmatrix}, \quad (0.3)$$

$$\xrightarrow{R_2 \leftarrow R_2 - (k-3)R_1} \begin{pmatrix} 1 & 2 \\ 0 & -2k \end{pmatrix}. \quad (0.4)$$

For collinearity $\text{rank}(M) = 1$, so the second row must be zero:

$$-2k = 0 \implies k = 0.$$

Thus $k = 0$ and the points are collinear for $B = (4, 0)$.
